

DRUG DETECTION ASSESSMENT

Everyone wants to wipe out drugs from their workplace.

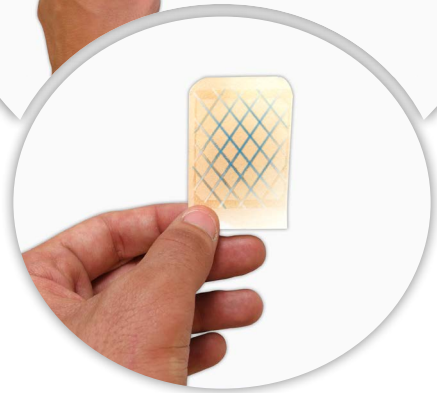

We can do it — LITERALLY!

Drug use may be affecting your work environment whether you see it or not.

- The employee with more absences than usual.
- An unexplained drop in productivity.
- More frequent accidents.

Finally, there is a discreet and non-invasive way to find out if drugs have invaded your workplace. When an employee has come into contact with illegal drugs, traces can be left on surfaces in your work environment by their fingers and hands.

We wipe frequently touched surfaces with our special wipes. Then a highly sensitive detector chemical is sprayed on the wipe and a color change reveals drug presence. Even micrograms of drug residue can be detected!

We evaluate your environment — Before you decide to test or confront an employee. Assessments can be conducted without employees present, checking your entire workplace or just the areas used by particular employees you're concerned about.

We can apply Wipe/Spray assessments to virtually any surface:

- Clothing/Personal Possessions
- Bathrooms (dispenser, faucet, etc.)
- Furniture and counter tops
- Walls, doors, cabinets, etc
- Equipment (i.e. computer mice and keyboards, telephones, etc.)
- Papers, binders, luggage, etc.
- Vehicles (internal/external)

We can check work areas, break areas, and restrooms — any place where drug traces could be transferred from fingers and hands. The process is non-toxic — safe for you and your workers, safe for the environment.

The benefits from avoiding drug use in your business:

- Improved productivity
- Reduced theft
- Fewer drug-related accidents
- Less time away from work
- Lower medical costs
- Reduced workman's comp costs
- Avoid crippling liability

Remember this: the only way to take action and protect your business is if you know what's going on.

Call for a **cost-free** assessment proposal — the first step to wiping out drugs in your workplace!
